Performance

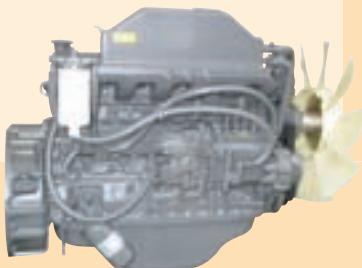

This hydraulic excavator is equipped with the air-to-water intercooler engine, which has the greatest power output in its class and excellent fuel economy. It assures outstanding workability, productivity, and efficiency through the e-EPOS system, the new and improved version of EPOS System. This will assure increase in operating capacity and decrease in fuel consumption.

Air to Water Intercooler Engine

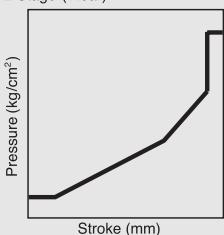

Greatest power output and high-efficiency engine in it's class.

Environment friendly, Green engine.

This machine is equipped with the engine meeting the U.S. EPA Tier-II Regulations and European stage-II Regulations requiring the reduction of harmful NOx, PM, HC, and CO emissions.

2-Stage (Near)

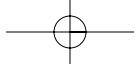

Improved maneuverability and control

New technologically advanced control valve and joystick valves have been installed to allow speedy, smooth and responsive control.

Joystick grip with 2 switches

Spare switches are installed on both joystick grips to control the additional attachment.

Excellent Reliability

Doosan's world-class center for product reliability performs sophisticated testing on all completed products, to ensure they meet or exceed market standards.

fan guard

A metal mesh guard has been installed over the fan blade to prevent accidental bodily injury.

Heat shield panel for turbo charger

The heat shield guard has been installed over the turbo charger to prevent the operator from inadvertently touching the hot surfaces while checking the engine area.

Working Environment

Wide operator cabin space meet the ISO Standards and expanded all-round visibility. The low-noise, low-vibration type comfortable cabin provides the operator with safe and ergonomic operating environment.

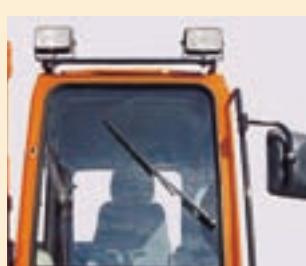

The handle with tilting function

Because the handle with tilting function can be adjustable forward & backward according to operator's figure & location, It supply the best operation & minimize operator's fatigue in the optimum condition.

Increased foot space

Instruments, controls, and accessories have been ergonomically located in the cabin and 300mm seat slide has been achieved to provide ample space for operator's feet and legs.

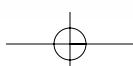

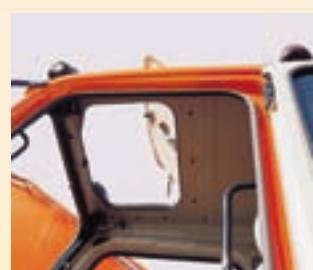

Long wind shield wiper blade

Front visibility is further improved by using the lengthened wiper blade (wiper area increased 35% compared to previous machine.)

Large ceiling cover

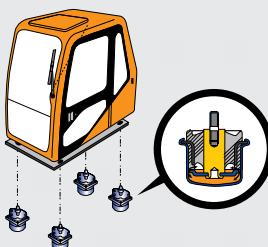

The ceiling cover can be opened to confirm the bucket operation even at the maximum excavating height. (Visual range increased by 25% compared to previous machine.)

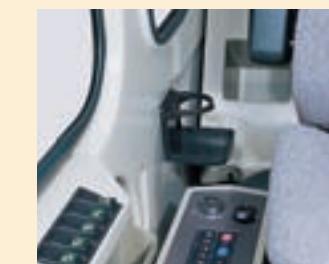

Low Vibration Cab Mounting System

By using a total isolating seal design (full sealing) outside noise has been drastically reduced to the levels comparable to that in a modern car. A viscous sealed mounting system has been incorporated, and the frame, cabin and seat have been designed to absorb major and minor vibrations, resulting in a significant decrease in vibration felt by the operator.

Cup holder

A folding style cup holder has been installed in the cabin allowing the operator to easily store a can or cup.

12V Spare Power Socket

This socket can be used for charging a cellular phone or powering a small 12V DC electrical device.

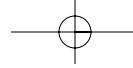

Fresh Air Type Air Conditioner

One touch selector switch for the air conditioner and heater output, featuring a multi-vent circulation system that allows for greater cooling / heating performance. Improved front window defroster system has been added to provide enhanced clarity and visibility during any working condition.

- Easy replaceable air filter.
- Larger cool air intake vents.
- Industry standard fresh air/recirculation control system incorporated.
- Modular electric fan condenser compartment.

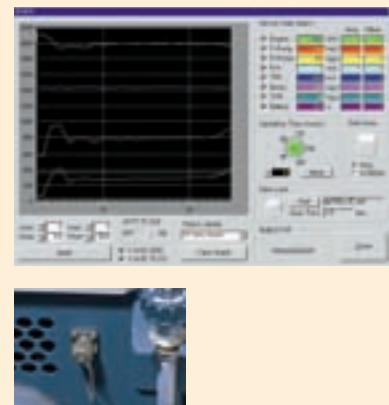

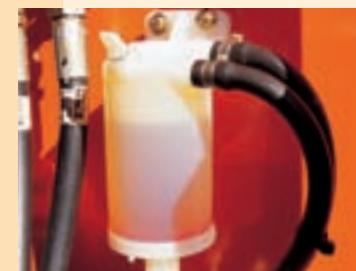

Maintenance

Quick and easy service checks, maximizing the excavator's life expectancy.

PC monitoring function (SMS)

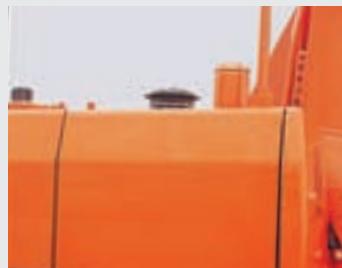

By connecting a laptop PC to the controller (e-EPOS controller) of the machine, data such as pump pressure and engine RPM can be displayed graphically. Also other various machine status data can be stored in memory and printed out using a printer.

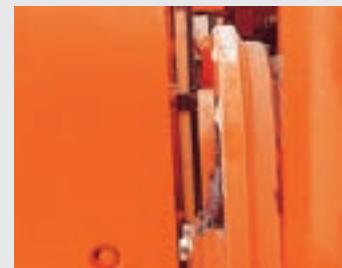

Water separator

The transparent glass water separator is mounted at a location easily accessible from the ground allowing easy maintenance of the fuel system.

Large fuel tank

The fuel tank with 350 liter capacity has been mounted to reduce filling up interval.

All range fuel level gauge

The fuel level gauge which show the fuel through all range is installed on the side of the fuel tank.

Engine oil drain valve

The engine oil drain valve with quick coupler provides fast and environmentally sound serviceability.

Electrical control access box

Pull-out style drawer for electrical control access box allows for easy service and maintenance.

Graphic display LCD Monitor panel

The information monitor panel displays both text and symbols for easy recognition of machine status and various other data

Simplified operation mode selection

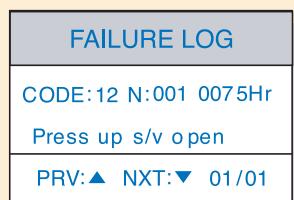

The 3 work modes from the previous models have been reduced to digging and trenching modes for easy selection.

- Digging Mode :

General Excavating, Ground Leveling, Loading Dump Truck, allows for versatility.

- Trenching Mode :

trenching or excavating of side wall, operations which require heavy swing work.

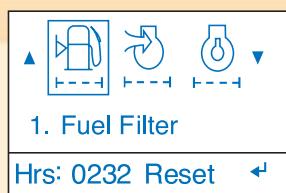

Self-diagnosis and fault history memory functions

Current faults and past faults history of the excavator control system are displayed and memorized on a real-time basis to enable correct diagnosis and quick repair.

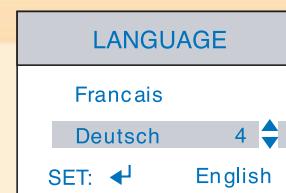

Real-time clock with day / date

The real-time clock displays date and day in easy to read format.

Filter / oil operating hour display

The hours in use for 9 filters and oils can be displayed so that replacement intervals can be easily recognized.

Multiple language display

The user menu can be displayed in multiple languages for the operator's convenience.

Real-time machine data display

Displays 28 different machine status data and information such as pump delivery pressure and engine RPM.
