

## RapidClimb Stirrups\* - PN 85052

The two RapidClimb stirrups fit on the curved or straight upright arms on your platform. The supplied bungee **MUST** be used with the stirrups.

**Step 1.** Slid one stirrup on each side of the platform so that they are on the inside of the platform and facing down - as shown in **Figure 1**.

**Step 2.** Once positioned, secure with the provided bolt and wing nut as shown in **Figure 2**.

**Step 3.** Wrap the supplied bungee cord around one side of the curved platform upright bars and push the s-hook through the loop as shown in **Figure 3**. The bungee must attach on the tree side of the stirrups.

**Step 4.** Hook the s-hook around the opposite curved platform upright bar and back onto itself as shown in **Figure 4**.

**Step 5.** Step onto the platform, pull your heel backwards into the bungee as shown in **Figure 5**, and secure the toe of your boot under the RapidClimb stirrups.

Occasional readjustment may be required as your footwear needs change. Stirrups may need to be slid up or down the tubing to allow for folding platforms to fold properly.
