

### **PL238WF - 38" Wide Format Laminator**

This 38" wide laminator is specifically designed for wide format computer generated output. While priced below \$6,000 complete with welded steel stand, this machine is by no means a "light-weight". It can run film to 10 mils and laminate material to .275" thick. Warm up is less than 5 minutes. With optional liner take up assembly it is capable of utilizing pressure sensitive laminates as well. Due to superior heat replacement characteristics of our exclusive heated roll system, the PL-238WF is particularly suited to simultaneous mounting and laminating on heat activated adhesive foam board. While providing the superior scratch and stretch free finish inherent with our heated roll technology the bond is so aggressive that any attempt to peel off laminated material will result in total destruction of foam board.

This machine is specifically designed for wide format applications and will readily complement your ink jet printer. If you are in the market for a machine with 3 foot wide capability that doesn't cost more than your shiny new 16 million color wide format printer, you would do yourself and the guy who writes the checks a very big favor by carefully examining the PL-238WF.

## PL 238WF SPECS

Laminating Width	38
Speed	Max Mechanical Speed: 7 fpm 1.5 CL 7 fpm @ 300 Degrees F 3.0 CL 4 fpm @250 Degrees F
Polypropylene Capable	Yes
Max Film Thickness	10.0 Mil
Max Material Thickness	.275
Cooling Fans	3
Warm Up Time	Approx. 7 min
Max Roll Dia. 1.5 mil	w/o stand-1000' w/optional stand-3000'
Stand	Optional w/3" Mandrels
Gapable rolls	Yes-Front Heat and Rear Pull
Solid State Temp Cont.	Yes-With Digital Readout
Motor Speed Control	Solid State/Variable
Slitters	Optional
Heated Roll Watts	850 ea 1,700 combined
Electrical Requirements	240 Volt 60Hz 16Amps (Also available in 120 Volt, Call for quote)
Dimensions	49Wx20Dx16H-w/o stand 40H-w/ stand
Weight	Net 90 lbs Shipping 140 lbs
Shipping Dimensions	52"Wx21"Dx19H
