

# DropTime™ Instructions

Electronic Scent Dispenser

**WARNING: ALWAYS ENSURE THAT DISPENSING END OF UNIT (NOZZLE) IS AIMED AWAY FROM BODY AND FACE DURING OPERATION.**

## Requires two(2) AAA Batteries – Included:

- To install batteries, simply loosen the single screw on the battery cover and remove cover, taking care not to lose it.
- Insert batteries, making sure to follow the positive (+) and negative (-) markings on the unit.
- Replace battery cover. Note: make sure tab on the end of the battery cover opposite the screw is properly inserted into its slot before tightening screw.

## Preparing the Drop Time scent dispenser:

- Fill unit with your choice of scent, then select the 20 minute interval setting.
- The red indicator light will flash for 15 seconds, after which the unit will begin pumping the scent\*.
- The unit is now ready for use. Turn the unit off until ready to set up and use, or set to intended mode setting to begin dispensing your scent.

\*Note: The unit should prime the first time. If scent does not dispense during this priming cycle, set unit to OFF position and repeat. The priming of the Drop Time is not necessary upon each use, only when first being used or when the unit runs dry.

## Settings:

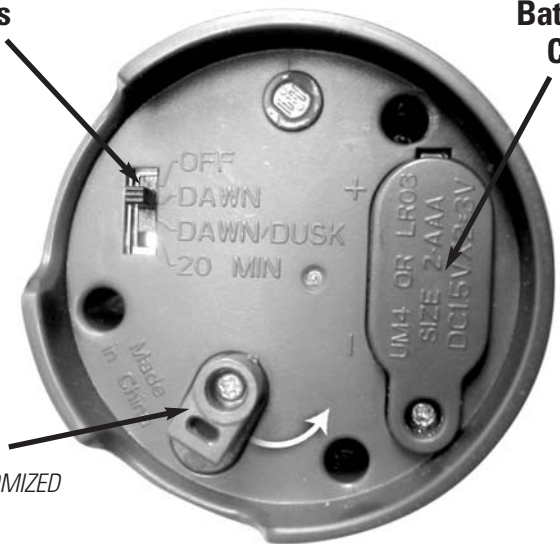

- There are three (3) setting options for the Drop Time scent dispenser. Each of these settings is detailed below:
  - > **DAWN** – Unit will detect the transition from nighttime to dawn. Once dawn has been detected, the unit will wait one (1) hour and dispense your scent. After dispensing, the unit will wait twenty (20) hours and repeat. *(2.5 oz. of scent lasts approximately 20 days.)*
  - > **DAWN/DUSK** – Unit will detect the transition from nighttime to dawn. Once dawn has been detected, the unit will wait one (1) hour and dispense your scent. After dispensing, the unit will wait eight (8) hours and dispense again, prior to darkness. The unit will then wait approximately twelve (12) hours and repeat. *(2.5 oz. of scent lasts approximately 10 days.)*

Battery Case

Flow Control Switch

*(Shown in ATOMIZED position)*

> **20 MIN** – Unit will wait 15 seconds, then dispense your scent. After dispensing, the unit will wait twenty (20) minutes and repeat. *(2.5 oz. of scent lasts approximately 10 hours.)*

**Note that the red indicator light will flash for the 15 seconds prior to dispensing. This allows the user time to aim the nozzle away from him/her before the unit dispenses the scent.**

## Flow Control Options:

- **STREAM** – make sure the angled block below the dispensing nozzle is turned out of the path of the scent output. This will provide a solid stream upon dispensing.
- **ATOMIZED** – Turn the angled block so that it is in the path of the scent output. This will provide an atomized spray upon dispensing.

## Cleaning:

- Simply turn the unit upside down and lightly rinse the reservoir out. Once complete, check to ensure the screen is free of any trash. You can use a damp cloth to wipe out the inside of the reservoir. Do not use any strong solvents to clean the unit as these may cause odors that can contaminate and/or ruin your scent.
