

# WELCOME

# KNIGHT SHOOTING

Hello Muzzleloading Hunters

Thank you for selecting Knight Rifles as your muzzleloading choice. Believe me you can't go wrong. Let me list just a few thoughts and reasons for you.

1st and foremost-the first rifle I invented, the MK 85 was chosen in Field and Stream Magazine as No. 37 of the top 50 guns ever made; the only muzzleloader to make the list.

2nd - Knight Rifles are the absolute finest in accuracy-we guarantee it. Knight Rifles has won the prestigious Manufacturers Match at the NMLRA Range in Friendship, Indiana six years in a row. Putting it simply, we can't be beat.

3rd - All Knight Rifles made today are 100% waterproof. No other muzzleloader company can make this claim, and it's all due to our 209 Full Plastic Jacket. There is nothing better.

4th - Muzzleloading is by far the safest and most educational way to introduce youngsters to the sports of hunting and shooting. This gives them the understanding of just how a firearm works.

5th - Knight Rifles constantly lobbies to promote better muzzleloading hunting opportunities in several states. To promote hunting opportunities in your state, attend your commission meetings. Yes, you do make a difference.

6th - We at Knight Rifles are strong supporters of all the conservation clubs and associations such as the NWTF, RMEF, SCI, NRA and others. You will see rifles and shotguns in this catalog with medallions from RMEF and NWTF. A portion of the sale of these models will go to the enhancement of hunting opportunities.

Many people ask me which muzzle loading rifle I prefer to hunt with. For me that is easy, the Extreme .52 cal shooting the 375-grain Red Hot bullet with 150 grains of 777 powder. The .52 is the most powerful muzzleloader in the world! I have always liked hunting with bolt-action rifles due to the fact that they are inherently more accurate. So take a minute to enjoy our new catalog and see what's new with Knight Rifles for this year. I hope to see you in the field sometime.

Sincerely,  
Wm (Tony) Knight

## Knight wins 6th consecutive National Muzzleloading Rifle Association Manufacturer Accuracy Competition!

Every year, the world's muzzleloading rifle manufacturers square off in a shooting competition that tests accuracy unlike any other event. At the 2005 shoot in Friendship, IN we took home #1 honors, again, for the sixth straight year!

Knight Shooting Team (left to right) Tony Capriglione, Kevin Warner, H.P. Gregory, Bob Elka

**NEW FOR 2006**

You asked for a muzzleloader accurate enough for shots out to 200 yards, and once again Knight has delivered. The new Knight Long Range Hunter, available in both .50 and .52 calibers (see pages 14-15 for more information on .52 caliber models), is the perfect combination of distinctive styling, awesome power, and pinpoint accuracy.

The handsome spiral custom fluting\* on the 27-inch Green Mountain Rifle Barrel gives the Knight Long Range Hunter a unique profile for balanced functionality. Knight engineers have allowed the barrel to "free-float" in the stock with just two mounting points, making the Knight Long Range Hunter the most accurate muzzleloader on the market today.

Another breakthrough for the Knight Long Range Hunter is the cast-off stock design, which makes the rifle extremely easy to shoulder and shoot. Cast-off stocks are available for both right-handed and left-handed shooters. The stocks also feature a beavertail forearm and vent slots for heat dissipation. The Knight Long Range Hunter features an adjustable target trigger for creep/pull weight and overtravel to customize the fit and feel of the rifle for increased accuracy.

If you are tired of talking about the one that got away, the Knight Long Range Hunter is the solution for you. Available with either a Forest Green laminated wood or Sand Stone stocks. The Knight Long Range Hunter is a muzzleloader you will be proud to own!

## VERSATILE AND DEPENDABLE

The Knight Extreme is Knight's most versatile and dependable muzzleloader. If you are looking for one firearm to use in a variety of hunting applications, the Knight Extreme is made for you. The Knight Extreme can handle virtually any game in any weather condition, even at long range.

Knight designed the Knight Extreme to be as easy to clean and maintain as it is to shoulder and shoot. The quick release bolt system allows fast and easy cleaning of the bolt mechanism without any tools. The Full Plastic Jacket technology, in conjunction with the innovative 209 primer, insure that your Knight Extreme will fire even in rain and snow. Knight has tested the reliability of the ignition system by submerging it in water for an hour. Even after being submerged for an hour the system never failed. When every shot counts, Knight knows how to keep your powder dry.

The Knight Extreme is available in .50 and .52 calibers (see pages 14-15 for more information on .52 caliber models) to match your big game hunting needs. Knight offers a wide variety of stock options and Green Mountain Rifle Barrel finishes for the Knight Extreme in addition to the shot accuracy guarantee. Performance, accuracy and styling make this the most versatile firearm in the Knight arsenal.

## STATE-OF-THE-ART MUZZLELOADERS

The Master Hunter Extreme represents the ultimate in styling and technology for rugged and reliable hunting in a variety of environments. The Master Hunter is designed for one-shot kills no matter what big game you choose to hunt.

Available in .45 and .50 calibers, this muzzle-loader is "state of the art" in design and functionality.

Knight outfits every Master Hunter with a "Cryogenically Accurized" Green Mountain Rifle Barrel. This process utilizes a freezing and heating process to relieve stress in the barrel at the molecular level. The process dramatically increases the accuracy of the barrels already guaranteed to shoot 1-1/2" three-shot groupings at 100 yards. The fluted design of these barrels reduces weight and speeds cooling, making the Master Hunter a favorite of hunters everywhere.

**GUARANTEED SHOT ACCURACY**

To ensure reliability in a variety of conditions, the Master Hunter Extreme utilizes Knight's reliable quick release bolt system. This system is designed for ease of use and quick cleanup. No tool is required to disassemble the bolt for cleaning. You can shoot with confidence in rain, sleet, or snow, because the Master Hunter utilizes Knight's Full Plastic Jacket technology for infallible ignition.

The detailing of the Master Hunter Extreme enhances the aesthetics and "feel" of this unique muzzleloader. You will be amazed at the comfort and balance of the laminated top grade wood stock with its ergonomic thumb-hole and palm-swell grip. The Knight logo is engraved in the trigger guard to complete the detailing.

## REVOLUTIONARY CONCEPTS

The Knight Revolution II brings a modern concept into the ongoing history of muzzleloaders. For 2006 Knight offers its new Knight Revolution II in the revolutionary .52 caliber (see pages 14-15 for more information on .52 caliber models). It's all-around big game medicine. Whether you hunt bean field white-tails or the daunting Alaska-Yukon moose, the new .52 Knight Revolution II has the downrange knockdown power and performance to handle any duty quickly and cleanly.

Also available in .50 caliber, the Knight Revolution II sports an innovative Quick Detachable Action, which disassembles without tools in seconds. A redesigned breech plug minimizes blowback and makes cleaning a snap. You won't be wasting precious time with the chore of muzzleloader cleaning like you find with most models. And if you appreciate the snappy loading of a lever-action, loading a Revolution II will spread a smile across your face. Simply push the lever into the open position to access the weatherproof chamber and insert the Full Plastic Jacket. Snap the lever to close the action and your primer is protected from all elements and ready for the task at hand.

A revolutionary in-line design requires an innovative and stylish stock. The Knight Revolution II two-piece stock is sculpted to catch the eye and match the shooter perfectly. Balanced for a comfortable feel, Knight offers the Knight Revolution II in four different finishes including black composite, camouflage composite, and wood laminate.

Green Mountain Rifle Barrels have earned a reputation in the field and at the range for top performance. Knight incorporates this trusted product into every Knight Revolution II and every Knight muzzleloader produced. Precision tolerances guarantee that your Knight Revolution II will achieve a superb group at 100 yards.

**GUARANTEED  
SHOT ACCURACY**

Your Knight Revolution II comes equipped with fiber optic sights to garner the most from available light at dawn or dusk. It's also drilled and tapped to accept

## A NEW TRADITION OF DEPENDABILITY

For over 20 years, Knight has pioneered new design visions for in-line muzzleloaders. In 2005, Knight continued this legacy with the introduction of the groundbreaking Knight Vision Muzzleloader. Ready for delivery in 2006, the Knight Vision is a remarkable blend of new concepts and simple but reliable functionality. The new Knight Vision features a hammerless design and a smooth break-open action for quick and simple breech plug removal for cleaning.

Another first for the Knight Vision is the use of overmolding which extends the protective qualities of the polymer stock over receiver. This extra-tough coating protects the Knight Vision from the effects of bad weather and maintains the aesthetics of the rifle through years of serious hunting.

Knight's engineers have designed the new Knight Vision for easy maintenance and cleaning. The lever under the trigger guard opens easily to break open the action for fast cleaning of the Green Mountain Rifle Barrel. The Quick Detachable Trigger disassembles in seconds and the receiver design minimizes blow-back, keeping the trigger mechanism clean for crisp, reliable ignition. Continuing the tradition of 100% waterproof dependability, the Knight Vision uses Full Plastic Jackets to encompass the 209 primer and a tip-off extractor which make reloading a breeze. The Knight Vision utilizes a safe and dependable crossbolt safety.

**GUARANTEED SHOT ACCURACY**

If you are a big game hunter looking for a rugged and unfailingly reliable .50 caliber in-line muzzleloader, the new Knight Vision is the firearm for you. It is available in Mossy Oak® Break-up™, Realtree Hardwoods® Green HD™ and Black Composite.

# KNIGHT .52

## REAL STOPPING

If you are serious about big game hunting, the .52 Caliber is the firearm for you. The .52 utilizes a forward ignition principle to create more stopping power than a .54 caliber can deliver - even at extended ranges.

The secret of the .52's incredible power is the PowerStem Breech Plug which ignites the loose powder column further forward in the barrel to increase velocity by 11 percent. At 200 yards, the .52 calibers have 2 inches less drop and deliver twice the downrange energy. All current model .52 caliber rifles are shipped with 2 breech plugs, a PowerStem is installed in the rifle and a conventional breech plug is in the box. If you choose to shoot pelletized powder, you must first install the conventional breech plug. Testing at Knight Rifles has shown that 150 grains of Triple 7 ffg loose powder yields higher velocities than 150 grains of pelletized powder.

Despite the increased velocity, recoil with the .52 is not a problem. Uniform acceleration for smoother recoil, in conjunction with the Xcoil ReCoil Pad, reduces overall recoil by up to 50 percent.

**GUARANTEED SHOT ACCURACY**

The .52 Extreme is as accurate as it is powerful. Knight has developed sabots with thinner petals that allow the .52's bullet to release faster for pinpoint accuracy. With the Green Mountain Rifle Barrels you can hunt with confidence knowing the .52 is guaranteed to perform with extreme accuracy beyond 100 yards. Knight's innovative quick release bolt system makes cleanup uncomplicated since no tools are required to remove the bolt. Dependable ignition in any weather is assured with the 209 primer seated in a Full Plastic Jacket. Knight .52 caliber rifles come in Knight Extreme, Knight Bighorn, Knight Revolution II and Knight Long

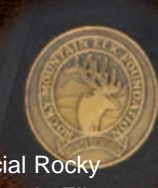

Knight Rifles is a proud sponsor of the Rocky Mountain Elk Foundation. A portion of the proceeds of the sales of these rifles goes to RMEF to preserve the future of Elk hunting.

**TAKE IT ANY-WHERE!**

**B**ecause of the curious nature of hunting laws in the United States, some muzzleloader ignition systems are illegal in some states. In 2005, Knight brought the Knight Bighorn out of retirement, because it is capable of using a variety of ignition systems. Demand for the Knight Bighorn has continued to grow because with simple modification it is legal everywhere.

The extremely versatile Knight Bighorn is capable of using a 209 primer in a Full Plastic Jacket, as well as a #11 percussion cap or musket cap. The Knight Bighorn is the firearm of choice for hunters who travel extensively.

The reliable cocking mechanism in the Knight Bighorn is designed to provide instant firing with any of the three firing systems. The

Bighorn's 26 inch Green Mountain Rifle Barrel is the ideal length for a variety of hunting environments. The Knight Bighorn is available in both .50 and .52 calibers (see pages 14-15 for more information on .52 caliber models), and like all Knight muzzleloaders is guaranteed for shot accuracy.

The stock for the Knight Bighorn can be ordered in black

## WHEN ONE SHOT COUNTS!

**T**urkey hunters know the value of one shot, because one shot is usually all they get. The TK2000 delivers one shot with accuracy unrivaled by any other shotgun of any design or manufacture. You can shoot the TK2000 with confidence because it is manufactured with the legendary reliability built into all Knight Muzzleloaders.

Knight has patented a jug-choke design for this in-line shotgun, which allows the shot to expand before directing it through the choke tube for unequaled pattern concentration. No other shotgun can equal the 85 percent shot density in a 30- inch circle at 40 yards delivered by the TK2000.

The time-tested simple action of the TK2000 in combination with the Full Plastic Jacket Ignition system make this the shotgun of choice for hunting in inclement weather.

The extremely reliable 209 primer used in the system means you can shoot with confidence on sunny days and snowy days alike.

To enhance the balance and handling of the TK2000, Knight has introduced a new thumbhole stock for 2006.

There will be no sun glinting off the barrel since each TK2000 is completely camouflaged. The composite stock is checkered on the pistol grip and forearm for a sure grip when the excitement peaks. When one shot counts, experienced hunters count

Test pattern results from the TK2000

Total Yardage	Number of shot in a 30" diameter	Percentage of shot in a 30" diameter
25 yards	330	97%
30 yards	328	96%
40 yards	289	85%

# A MUZZLELOADER BUILT FOR THOSE DEEP WOOD HUNTS

If you had a fancy for your grandpa's brush gun, you'll be right at home with the rugged and simple features of the Wolverine 209. This short but nimble youth muzzleloader features a 22" Green Mountain Rifle Barrel with a black composite stock and blued barrel.

The Wolverine 209 features the Full Plastic Jacket technology to outperform others in the nastiest of weather. Obviously it gets its 209 designation from the use of the 209 primer which is the most reliable ignition system available to muzzleloader hunters today. The Wolverine 209 uses a simple cocking mechanism to provide easy performance for a novice muzzleloader.

For customer convenience, Knight offers the Wolverine 209 in a handy value pack. For the youth muzzleloader enthusiast, the Wolverine 209 comes with a 12 1/2" length of pull. Besides a better fitting firearm, the Value Pack contains a full line of shooting and cleaning products, sabots, bullets, and an instructional video.

Lightning quick speed, nimble characteristics and simplicity, the Wolverine 209 is a solid choice for any youth hunter.
