Riverside® Mystic® Series

To fish, these lures present a realistic visual image and the perception of live baitfish smell and taste. Mystic lures feature a patented 4-color image process that duplicates the intricate detail of certain baitfish patterns. These patterns make the bait look very natural to gamefish and will fool even the most wary bass or walleye. But that's not enough! Fish have a sense of smell that can detect parts per million and they use it to feed. This is where Live Prey Technology (LPT) comes in. Our exclusive LPT formula replicates live baitfish and the enzymes released by those fish when being preyed upon. These enzymes trigger the feeding habits of bass, walleye, crappie and other fresh and saltwater gamefish. Our Live Prey Technology accurately replicates the enzymes of live baitfish and gamefish know the difference. LPT will help you attract and catch more fish.

Mystic 2" and 3" Shad (5 ct.)

Shad are the number one forage base for most gamefish! The Mystic Shad is simply the next best thing to a live shad. Featuring our patented four color image process, realistic body design with swimming shad tail, and our exclusive Live Prey Technology (LPT). The Mystic Shad was designed to cover any species whether fresh water or saltwater.
